

## Downloading Nomad Timetables

Once you have downloaded the Nomad reader to your phone (from the URL: [www.jnomad.com](http://www.jnomad.com)), you will follow the above screens to download one or more timetables onto your phone. Use the Keypad Number 9 or the Soft key to continue. When you get to **screen 6**, pressing Keypad 9 or Continue will return you to **screen 4** where you can choose to download more timetables or proceed to the **Home Screen** to begin using Nomad. (See below)

## Using NOMAD

Nomad Uses **3 Main Screens**. These are represented as **Tabs** on your **Home Screen**:  
**“Home”** (Screen 1), **“Times”** (Screen 2a) and **“Info”**(Screen 3)

**Screen 1 “Home” Tab:** Nomad will always open to this screen and with the selected **Timetable** and **Departure** and **Arrival** points listed. **Keypad 1** will give you a list of timetables to choose. **Keypad 3** or **4** will provide a list of available stations to choose from, for both arrival and departure Stations. When you close Nomad, it will always “remember” your last settings upon reopening.

**Screen 2a “Times” Tab:** Use the Left/Right Navigation Button to move to this Tab. This screen lists the next series of departures from your chosen Station with arrival at your chosen station. By pressing **Keypad 8** (in this instance – depends on your screens size as to how many are displayed) You will go to the next 5 services and so on for up to 24 hours ahead. Nomad will automatically show you Day changes and it also takes into account weekends and public holidays.

On this screen, pressing the corresponding **Keypad number**, or using the Soft Key **“Update”** or the **“Fire”** Button (when a number is highlighted), you are choosing to use the gprs network to gain an update about that particular service. (This action will accrue data charges from your service provider. **Please note:** Laborotech or the Transport Operator make no income from this data charge)

By updating **1>** or **2>** you will gain any information relevant to that particular station – eg, Car Park notification, ticket office availability and hours etc.

By updating any of the other numbers, you will gain information about the entire Network, and/or that particular service. For example, if there has been a snap strike and the whole network is down for two hours, you will hear about it here. If your particular service is delayed for any reason, you will know why and how late and if other arrangements are planned for. When made available, this is where you will gain **“REAL TIME”** info about your service. (Screen 2b is an example of an update message – use the Navigation Key to scroll down the messages on this screen.)

**Screen 3 “Info” Tab:** Use the Left/Right Navigation Button to move to this Tab. This screen will show you the full schedule of your chosen service. Your two stations will be in **bold**. An arrow will point at the station the train is approaching, if it has already left your departure station, as shown in **Orange** font on the **“Times”** Tab. (Handy if you are collecting someone from the station) This will also show whether your service is an express as it only shows stations your service will stop at.

**REMEMBER:** Use the **0 Key** at any time to bring up HELP for that particular Screen.
